

DevOps 30-Day Interview Preparation

Day 04 - Linux Disk & Storage Management

Objectives

Learn Linux storage troubleshooting and production disk investigation.

Commands

df -h - Filesystem usage
du -sh - Directory usage
lsblk - Block devices
mount - Mounted filesystems
find - Locate large files

Memory Tricks

df = Whole filesystem
du = Directory usage
lsblk = Storage devices
find = Locate files

Production Flow

No space left on device

1. Check filesystem
2. Find large directories
3. Find large files
4. Verify safe cleanup
5. Restore service
6. Root Cause Analysis

Root Cause

Avoid deleting blindly. Identify why the disk filled. Configure log rotation, monitor disk usage, and fix recurring issues.

Interview Revision

Difference between df and du?
Why use -h?
What does lsblk show?
When would you use find?

Engineering Mindset

Investigate → Collect Evidence → Root Cause → Fix → Verify → Prevent
