

DevOps 30-Day Interview Preparation

Day 03 - Linux Networking & Log Analysis

Objectives

Understand Linux networking, connectivity testing, HTTP testing, log analysis and production troubleshooting.

Networking Commands

hostname -I - Show IP address
ip addr - Network interfaces
ping google.com - Network connectivity
curl localhost:3000 - Test application response
wget URL - Download files
ss -tulpn - Show listening ports

Log Commands

cat - Small files
less - Large files
tail - Last lines
tail -f - Live logs
grep ERROR app.log - Search logs
journalctl -u nginx - Service logs

Memory Tricks

ping = Can I reach the machine?
curl = Can I reach the application?
wget = Download files
tail -f = Live log monitoring
grep = Pattern search

Production Flow

Website down?

1. Network
2. Server
3. Service
4. Ports
5. Application
6. Logs

Interview Questions

Difference between ping and curl?
Difference between curl and wget?

Difference between cat and less?

Why use tail -f?

Why use grep?

Key Takeaways

Think in layers: Network -> Server -> Service -> Application -> Logs.

Investigate -> Understand -> Fix.
