

# Day 01 - Git Fundamentals

## Objectives:

- Git, Version Control, Git vs GitHub
- Centralized vs Distributed VCS
- Repository, Working Directory, Staging Area, Local & Remote Repository

## Workflow:

Edit File → Working Directory → git add → Staging Area → git commit → Local Repository  
→ git push → GitHub

## Key Learnings:

- Git stores project snapshots.
- Working Directory contains modified files.
- Staging Area prepares the next commit.
- Commit creates a snapshot.
- .git contains Git metadata and object database.

## Interview Questions:

What is Git?

Git vs GitHub?

What is Version Control?

Why Staging Area?

What happens after git init?

What is inside .git?
